

How Living Things Obtain Energy

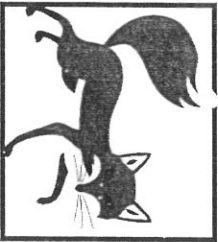

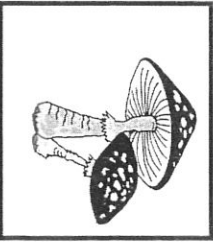

Producer

Consumer

Decomposer

Fact	Example	Picture	Synonym	Definition

Directions: Cut out the squares below and glue them down under the appropriate category.

Fungi & Bacteria	Cow	Heterotroph
Organisms that make their own food		Use sunlight to photo-synthesize.
Cactus		Organisms that absorb and break down dead matter into chemical parts so nutrition can be recycled into the soil
Heterotroph	Organisms that get their food through other sources	Detritivores consume dead plant and animal matter and feces so decomposers can break it down further
Autotroph		Group consists of herbivores, carnivores, and omnivores - scavengers too
